PORTFOLIO ↗

## SKILLS

**Programming**
Python, SQL, JavaScript, TypeScript, Java

**Back end & data**
FastAPI, SQLAlchemy, pandas, scikit-learn, PostgreSQL, Supabase, Kafka / Redpanda, Debezium, Apache Beam

**Front end**
React, Streamlit, Tailwind CSS, Node.js, Express

**AI**
Claude, Gemini and OpenRouter APIs; prompt design; guardrails, PII masking and evaluation

**Cloud & DevOps**
Git, GitHub Actions, Docker, Render, Google Cloud, AWS S3, Azure

**Practices**
Test-driven development, CI, pair and mob programming, POPIA-aware design

## CERTIFICATIONS

**Microsoft AI Fluency**
Microsoft · 2025

**Microsoft AI Skills Fest**
Microsoft · 2025

## LANGUAGES

English · Sepedi · isiZulu · Tshivenda

## STRENGTHS

Problem solving · Communication · Teamwork · Adaptability · Fast learner · Attention to detail

# Dikeledi Kwenaite

Software Engineer · Data & AI Engineer

Software engineering graduate from WeThinkCode_ with a Data Engineering elective, now a Digital Associate at CAPACITI. I build practical AI and data software for South African problems (schools, clinics, spaza shops) with safety, privacy and honest measurement designed in from the start. I work across Python back ends, data pipelines and web front ends, and ship to production with tests and CI.

## Experience

### Digital Associate — Current

CAPACITI · Johannesburg

- Build AI and data products in weekly sprints; designed, built and deployed **SchoolConnect** (below) as a solo developer over an 8-week programme.

## Featured project

### SchoolConnect: AI help desk for South African public schools

Python · FastAPI · SQLAlchemy · Streamlit · PostgreSQL (Supabase) · scikit-learn · GitHub Actions · Render

- Classifies parent messages in five South African languages (96% accuracy; 0 of 6 critical safety cases missed) and routes them to staff with office-hour response deadlines and automatic escalation.
- Child-safety guardrails that can only raise urgency, PII masking before any LLM, role-based access and an audit log, designed around POPIA.
- Forecasts busy weeks with gradient boosting (January rush predicted within 16%) and generates weekly PDF reports for each department.
- Live on Render and Supabase with scheduled jobs on GitHub Actions; 402 automated tests in CI; profiling made the workload maths 30–60× faster.

## Selected projects

**ClinicQ**
AI patient intake and triage for clinics, with danger-sign rules in five languages.
**Python · Streamlit · Claude API**

**Telecom streaming data platform**
WeThinkCode_ capstone: change data capture, streaming and a usage API.
**Redpanda (Kafka) · Debezium · PostgreSQL · FastAPI · Docker**

**Quality & Returns Intelligence**
Sentiment and defect detection from customer feedback and returns.
**Python · scikit-learn · Streamlit · Plotly**

**CreateAI**
Content and code generation from prompts and uploaded documents.
**React · Vite · Express · OpenRouter**

**StudyBuddy AI**
Explains, summarises and quizzes from students' own notes.
**Node.js · Gemini API · Tesseract OCR**

**Kredit Book**
Offline credit book for spaza shops, with WhatsApp and SMS reminders.
**JavaScript · Progressive Web App**

## Education

### Occupational Certificate: Software Engineer (NQF 6) — Completed

WeThinkCode_ · Data Engineering elective

- Data pipelines (pandas, GCS, S3, PostgreSQL, Apache Beam, Docker); Java and OOP, including a multiplayer TCP game built in a team of three; TDD.

### Electrical Engineering NATED (N1–N5) — Completed

Letaba TVET College · Capricorn TVET College
